

Avanite WebData Management

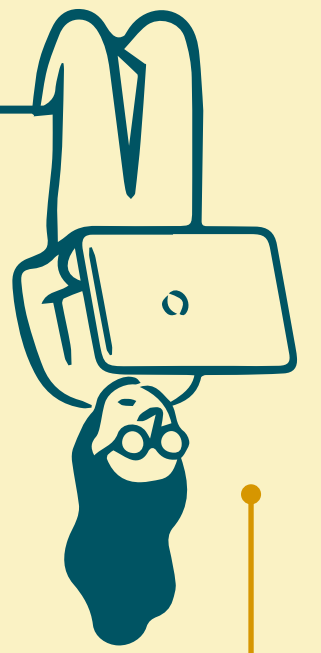

The Challenge

As users access web resources, be these on premises, in the cloud or on the internet, cookies, site data, session data and browser cache data accumulate

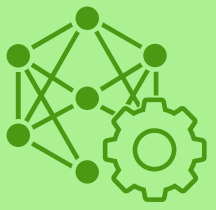

The natural behaviour and constant evolution of browsers requires regular Admin action and intervention

The internet – the greatest enabler also becomes the greatest pain for Admins

The Solution

A holistic, automated solution to clear unnecessary browser history, site data, cookies, etc., improves Citrix VDI performance and security

Defined by enterprise policies, it unifies Citrix VDI administration with Webdata Management

Takes care not to delete data from active sessions or remove useful browser data

Citrix + Avanite performs consistently every single time

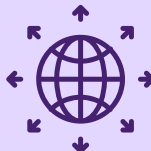

The Results

Performance, storage, and user experience cost a premium – not anymore with Citrix + Avanite

The dangers arising from adware, malware, malvertising and data breaches are mitigated by removing unnecessary browser data – like tracking and advertising cookies

Citrix and Avanite go hand in hand to ensure the greatest enabler remains the greatest enabler and admins can perform the functions they're hired for.
